

ID Label/Location

Photograph showing placement of Label

The HVIN number or FY5004 is printed on the PCB.

The label is 12mm x 16mm in size and the material is a pearl white, gloss polyester thermal transfer label, ideal for applications that require outstanding print quality and excellent smear and scratch resistance. It is a permanent adhesive and is also waterproof. Due to the size of the label, the model number is printed onto the module, directly below the label.

The FCC part 15 warning is included in the manual, as there is not enough space on the device for this.

The host device must also have an external label remarking “Contains 2ALBF-5004”. This label is provided with the same permanent waterproof label.
